An experimental LATEX Poker Package

Olaf Encke <olaf.encke@gmx.de>

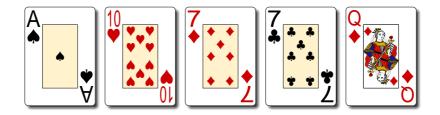

This document illustrates the possible variations in displaying playing cards available in the LATEX poker package.

1 Inline Poker symbols

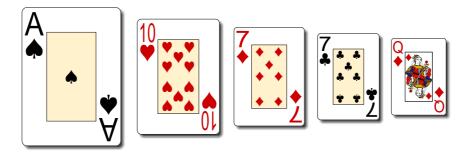

There are several possible styles for inline cards. The default way is as small cards, i.e. They can also be displayed as simple symbols $A \clubsuit K \heartsuit Q \spadesuit J \spadesuit 10 \clubsuit$ or as boxed symbols $A \clubsuit (K \heartsuit) (Q \spadesuit) (J \spadesuit) (10 \clubsuit)$. A card back \boxtimes is available, too.

2 Floating Poker cards

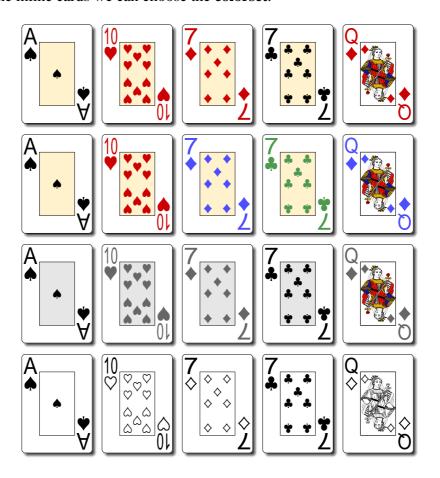

The big floating cards offer a lot of options for design. The default design looks like this.

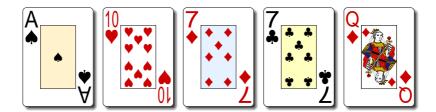

The most basic variation is the **size**.

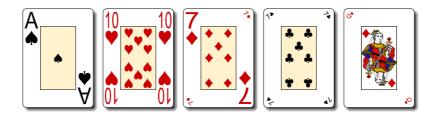

As with the inline cards we can choose the **colorset**.

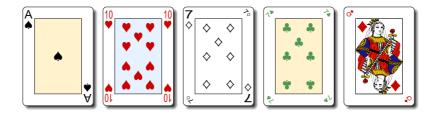

The **frame background** can be varied separately, either with predefined colors as shown here or by using a selfdefined color.

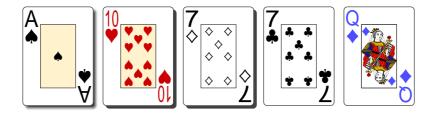

It is also possible to place indices in all **four corners** or use **peek indices**.

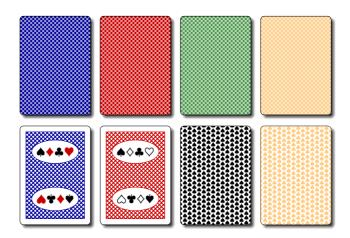

Besides the **jumbo indices** a **regular index** can be used. All other options remain available.

The **shadow** of the cards can be shown blurred, solid or deactivated.

Card backs are also available in various styles and customizable in color.

3 Usage

To make the poker package available within a LATEX document you have to add

\usepackage{poker}

to the preamble. Then you can change the options used with the command

\setkeys{poker}{option=value[,option=value]}

anywhere within the document.

3.1 Inline cards

To print inline cards you just need to call the macro associated with the card you want.

\As\tenh\sevd\sevc\Qd

creates the cards A . .

They are coded by their value and suit. Use this table to select the value

Ace	King	Queen	Jack	10	9	8	7	6	5	4	3	2
Α	K	Q	J	ten	nine	eig	sev	six	five	four	tre	two

and the next to select the letter for the suit:

Spade	Heart	Diamond	Club
S	h	d	С

You can influence the display of the inline cards with the options inline and colorset.

Option	Values	Description	
inline	symbol	uses simple symbols to depict cards	
	boxed	draws rounded boxes around the symbols	
	card *	draws simplified cards with value and suit stacked vertically	
colorset	2c *	suits in red and black colors	
	4c	suits in black/red/blue/green colors	
	gs	grayscaled suits	
	bw	black/white and outlined suits	

^{*:} default

3.2 Floating cards

To insert floating cards you begin with an environment in which the cards are placed.

\begin{cards}

\end{cards}

The code for floating cards is very similar to the inline cards, you just need to add the prefix crd to each macro. Thus the code

```
\begin{cards}
  \crdAs\crdtenh\crdsevd\crdsevc\crdQd
\end{cards}
```

gives us the output shown in fig. 1.

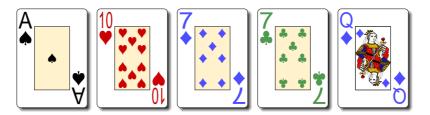

Figure 1: floating cards (default)

3.2.1 Options

Here we have a lot of options available to change the appearance of the cards. They are explained in table 1.

Since the peek option modifies the corners setting which in turn resets peek, it is advisable to first declare the corners option and then use the peek option if necessary.

The same applies to the framebg and backcolor options modifying the colorset option.

3.2.2 Advanced constructs

There are several commands available for the advanced placement of cards.

```
\begin{cards}
  \crdpair{\crdKs}{\crdtenh}%
  \crdflop{\crdsevd}{\crdsevc}{\crdQd}%
  \crdKc\crdKd%
  \end{cards}
```

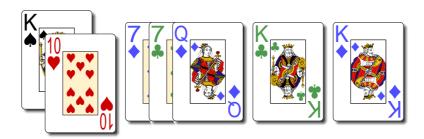

Figure 2: card pair, flop and two cards

Option	Values	Description
cpr	# (*7)	specifies the number of cards per row to be displayed
index	jumbo *	jumbo size indices
	regular	regular size indices
corners	2 *	indices in upper left and lower right corners
	4	indices in all four corners
peek	right	add peek indices to right corners
	left	add peek indices to left corners
	both	add peek indices to all corners
colorset	2c *	suits in red and black colors
	4c	suits in black/red/blue/green colors
	gs	grayscaled suits
	bw	black/white and outlined suits
framebg	beige *	color choices for inner frame background
	blue	
	white	
	yellow	
	<user></user>	user defined color
back	${ t simple}\ ^*$	diamond/squares styled card back
	suits	suits in ellipse on net background
	spades	spades filled background
backcolor	blue *	color choices of main background elements
	red	
	green	
	gold	
	<user></user>	user defined color
shadow	blurred *	gradient shadow
	solid	solid black shadow
	none	no shadow
*. default
